Are the foreigners also short ou cattle, sheep, mulies, cotton, cort, osts, tobacco, etc., which are all bringing better prices than they did last year? There does not seem to be anything peculiar about the apring, as it is formed by a depression in the rock and earth, snil the rocks lie in layers, as in a great many other such places. But it has the strange feature that on a hot summer day the icy air makes one shudder with cold. I understand not very far, somewhat closer to Esquire Black's house, there is a fault of fissure in the bill that has no bottom so far as man knows. A rock flung in it goes bounding and rebounding against the walls of the rock until lts noise die the waiss of the rock until its noise dies away in the unknown distance. The rugged hills about there show indications of some eruptions in bygone days, long before this country was known to the ear-liest settlers. Back East from this spring about half a mile, is the noted Black Sul phur spring, and by going around on the North side of this knob Westward, we find many places where the strata of the carth and rocks have been disturbed by some upheaval, and when we reach Good Spring Church, just up the creek to the right some 300 yards, there is a small ridge running some 200 yards perhaps, where the rock is all broken up, piled up In every conceivable way and lying in u ter confusion, plainly showing that it was formed by some internal explosion
